2007 MEV Rocket

Registration No: Unregistered

Chassis No: N/A

MOT: N/A

Estimate: £3,000 - £4,000

Motor Car Location: West Yorkshire

- Freshly built with very few 'test' miles covered
 - Requiring finishing/fettling to complete
 - Utilises a 1.6-litre Ford Zetec engine with five-speed manual transmission
 - Entered from long-term ownership
- Mills Extreme Vehicles, more commonly known as MEV, launched in 2003, and since has designed and manufactured some 28 kit cars. The MEV Rocket kit-car was an exoskeleton four-wheel, two-seater, mid-engined car. Prototyped in 2006 with manufacture starting in late 2006, they were marketed as the low-cost alternative to the Ariel Atom. By the time production ceased in 2009, around 150 kits had been manufactured.

Manufactured in 2007, this MEV Rocket is a freshly built example that requires finishing and fettling to complete. Finished in striking Blue and Yellow paintwork, the MEV is fitted with the 1.6-litre Ford Zetec engine allied to five-speed manual transmission. Entered from long-term ownership, the Rockets featured a fully welded exoskeletal chassis, front and rear bulkheads, aluminium fuel tank, and alloy floorpan.
